

ASBESTOS & NON-ASBESTOS GASKETS

These gaskets provide sealing between flanges to prevent leaks. Asbestos gaskets are made from compressed asbestos fiber (CAF), while non-asbestos types are composed of aramid, graphite, PTFE, or nitrile-bound fibers. Available in thicknesses: 0.5 mm to 5 mm, diameters: up to 1500 mm. Conform to BS 7531, IS 2712. Suitable for steam, oil, acids and solvents. Non-asbestos types offer safer, eco-friendly alternatives in high-temperature and pressure sealing in industrial piping and flanged joints.
