

RING JOINT GASKETS

Ring Type Joint (RTJ) Gaskets are solid metal gaskets designed for high-pressure applications. Made from SS 304, 316, Inconel, or soft iron; types: R, RX, BX; size range: $\frac{1}{2}$ " to 24"; standard: API 6A, ASME B16.20. Commonly used in petrochemical and offshore drilling for flanged connections in extreme conditions. RTJs ensure tight metal-to-metal contact for maximum sealing integrity.
