

STAINLESS STEEL 45 DEGREE ELBOW

SS 45° Elbows offer a smoother directional change than 90° elbows, minimizing pressure drop and turbulence. Available in seamless and welded forms in SS 304/316/321/Duplex grades. Size range: ½" to 24"; Schedule: SCH 10 to SCH 160. These elbows are manufactured per ASME B16.9 and EN standards. Used in fluid flow systems in industries such as food, marine, oil refineries and gas distribution where gradual directional flow is necessary.
