

STAINLESS STEEL BULKHEAD UNION

Bulkhead Unions are designed to pass tubing through panels or enclosures while maintaining a secure connection on both sides. Made from SS 304 and 316. These fittings support tube sizes from 1/8" to 1" and are pressure rated up to 6000 PSI. Threads and tube connections comply with ASTM A182 and ISO standards. Widely used in control panels, process instrumentation and hydraulic equipment for clean, panel-mounted tubing interfaces.
