

STAINLESS STEEL GATE VALVES

Gate Valves offer full-flow, linear shut off and are ideal for isolation in pipelines. Featuring a rising or non-rising stem, they're suitable for liquid and gas media. Made from SS 304/316/316L, available in sizes from $\frac{1}{2}$ " to 24", with Class 150 to Class 1500 pressure ratings. Designed per API 600, ASME B16.34 and BS 1414 standards. These valves are widely used in petrochemical, marine and power plant applications due to their corrosion resistance and durability under high-pressure conditions.
