

STAINLESS STEEL GLOBE VALVES

Globe Valves are used for regulating flow with a linear motion disc that opens and closes against the flow. Suitable for high-pressure and high-temperature applications. They provide excellent throttling capabilities. Made from SS 304, 316, and 316L, available in sizes $\frac{1}{2}$ " to 12", with Class 150-1500 pressure ratings. Conforming to BS 1873, API 602, and ASME B16.34. These valves are ideal for steam, oil, gas and corrosive liquids in power, chemical and process industries.
