

## STEEL THREADED FLANGE ( IBR & NON IBR)

Threaded Flanges provide a secure connection without welding, ideal for high-pressure piping with low-temperature operations. Manufactured from carbon/alloy steel with IBR and non-IBR variants. Sizes: ½" to 12", pressure: Class 150–600. Standards: ASME B16.5, IS 6392. Commonly used in gas lines, fire protection and boiler piping systems where welding is not feasible.
